Customer Problem Statement :

A customer problem statement helps identify the difficulties faced by users while trying to achieve a goal. It focuses on understanding the user's perspective, their needs, and the challenges they encounter. By clearly defining the problem, the development team can design a solution that improves the user experience and solves the user's needs effectively.

In today's digital world, many people search for **motivational, inspirational, and meaningful quotes** to stay positive, gain motivation, or share with others on social media. However, finding the right quote that matches a person's mood or situation can be difficult and time-consuming. Most websites provide random quotes rather than personalized recommendations, which makes it harder for users to find quotes that truly match their emotions.

The **Quotes Recommendation Chatbot** is designed to solve this problem by providing personalized quotes based on the user's mood, interest, or keywords using **Generative AI and an interactive chatbot interface**.
